

Ponderosa Pine

Pinus ponderosa

A trademark tree of the Okanagan, this long-lived conifer grows to 100 feet or more. The chiseled bark on the younger trees is black to dark red-brown, on mature trees is yellow brown to russet and broken up into scaly plates. Its thick bark makes it almost resistant to wild fires. This adaptable tree is well suited to large open fields, or on rocky slopes.

Sun zone

Full sun

Water zone

Low water
